

# 2010 VERMONT WILDLIFE HARVEST REPORT Moose

**FISH & WILDLIFE DEPARTMENT**  
(802) 241-3700 / [www.vtfishandwildlife.com](http://www.vtfishandwildlife.com)

Most of the programs described in this report are funded through the *Federal Aid in Wildlife Restoration Program*.

This program was initiated in 1937 as the Federal Aid In Wildlife Act and created a system where by taxes are paid on firearms, ammunition and archery equipment by the public who hunts. Today this excise tax generates over a hundred million dollars each year that are dedicated to state wildlife restoration and management projects across the United States. The State of Vermont use these monies for acquiring land, and for restoring and managing wildlife. These excise tax dollars, coupled with state hunting license fees have been the predominate source of money funding the successful restoration and management of Vermont’s wildlife resources.

# 2010 Moose Report

Four hundred and eighty-eight moose were harvested in Vermont's 2010 moose season. Hunting conditions were quite favorable with relatively cool and dry conditions prevailing throughout most of the 6-day season. Over 70 tons (an estimated 146,000 lbs) of boneless moose venison was harvested.

## Harvest Dates and Success Rates

Vermont's 18th moose season began on the third Saturday in October (16th). One hundred-eighty six moose were taken on opening day (Table 1). Overall success rate ended up at 64%, up from 58% for either-sex permit holders the previous year. Success rates by WMU and Permit Type are given in Table 2.

**TABLE 1. 2010 VERMONT MOOSE HARVEST DISTRIBUTION BY DATE, SEX AND AGE CLASS**

DATE	BULLS	COWS	CALVES	TOTAL	PERCENT
October 16	123	58	5	186	38
October 17	64	37	9	110	23
October 18	38	30	5	73	15
October 19	27	11	4	42	9
October 20	20	17	1	38	7
October 21	20	13	6	39	8
Totals	292	166	30	488	100

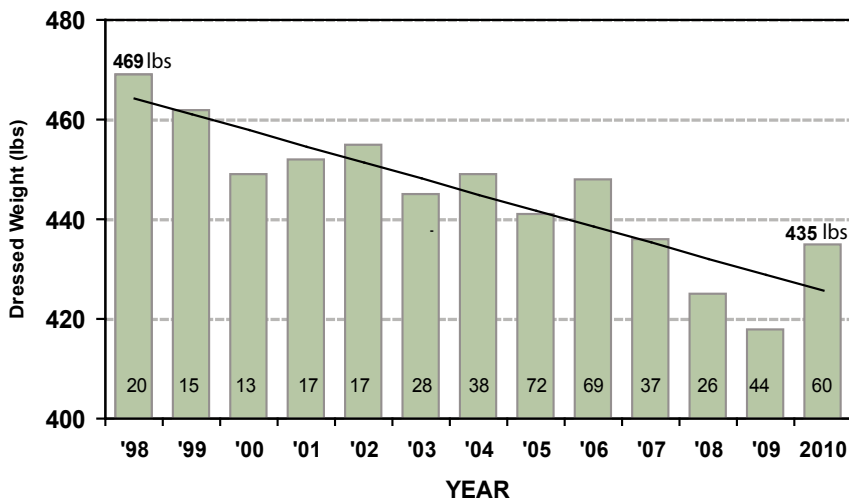

## 2010 Moose Season Lottery

A total of 12,028 valid applications were received for the 2010 Vermont moose season lottery (9,368 residents and 2,660 non-residents). Unsuccessful applicants from the previous seasons were awarded bonus points if they applied again in 2010. Ninety percent of the lottery permits (688) were allocated to residents and the remainder (77) to non-residents. An additional 5 permits were won by bidders (all non-residents) through an auction process, with winning bids ranging from \$4,570 to \$4,151, and 3 special opportunity moose hunt permits were issued to youth with sponsoring organizations.

Late deferments of 8 lottery winners resulted in a total of 765 either-sex permits being issued across 17 Wildlife Management Units (WMUs). There were no permits for antlerless moose issued in 2010.

FIGURE 3. OVULATION RATE FOR LEGALLY HARVESTED FEMALES  
COMPARISON OF 3 TIME PERIODS, 2009 AND 2010

926 Total Cows (93-99=118; 00-03=160; 04-08=500; 2009=87; 2010=61)

## Biological Data

Two hundred ninety three (60%) of moose taken were bulls, 166 (34%) were cows, and 29 (6%) were calves (16 males and 13 females). Completely-dressed carcass weights were obtained from 446 moose, or 91% of the total harvest. Twenty-five bulls weighed over 800 lbs, including the largest which was an 895-pound, 6-year old taken in Victory. The average completely-dressed weight of 14 male calves, 60 yearling bulls and 213 older bulls was 248, 435 and 662 lbs, respectively. The average beam diameter of 59 yearlings was 35.0 mm. Comparisons of yearling bull weights and beam diameters are shown in **Figures 1 and 2**, where much of these data come from measurements of Northeast Kingdom moose. The trend lines, especially for weights, illustrate the decline that had been observed in physical measurements due to over-browsing of food resources in this region of Vermont. An increase in yearling weights for 2010, however, may signal that the moose density has finally been reduced to below the carrying capacity of the habitat.

The heaviest cow was an 828 lb 9-year old taken in Concord. This was the heaviest cow ever reported in Vermont; the previous record was an 814 lb cow taken in Lemington in 1999. The average weight of 12 female calves, 30 yearling cows and 139 older cows was 224, 428 and 553 lbs, respectively. Complete sets of paired ovaries collected from 61 cows were sectioned and examined for evidence of ovulation. The ovulation rates (with 2009 rates shown in parentheses) were 0.13 ova/cow for 15 yearlings (0.15), 1.0 for 6 two-year-olds (0.88), and 1.13 for 40 cows > 3 years old (0.86). In healthy populations, cows > 3-years old generally have average ovulation rates from 1.25 to 1.75 ova/cow, and rates under 1.15 are indicative of a moose population that has exceeded the carrying capacity of the habitat. As was the case with body weights, the increase in ovulation rates of older, prime-aged cows is a signal that moose health in the Northeast Kingdom is on the road to recovery. **Figure 3** compares 2010 statewide ovulation rates by age classes with 2009 and 3 earlier time periods since moose hunting began in 1993.

FIGURE 4. VT MOOSE AGED BY CEMENTUM ANNULI - 2010 LEGAL HARVEST

Ave. age in years = 3.82 males (n=285), 4.23 females (n=152);  
 46% ≥ 4 years; n=437

### Moose Ages

A central incisor was also collected from 437 adult moose, then cleaned and shipped to Montana for aging by the counting of cementum annuli. The average age of the 285 bulls and 152 cows was 3.82 and 4.23 years, respectively (Figure 4). Twenty-three percent of these moose were yearlings, and 46% were > 4 years of age (well above the minimum goal of 25% as called for in the 10-year Big Game Plan. The oldest bull and cow were 13 and 14 years, respectively.

E1 & E2	212	479	5421	0.088	0.105	0.122	0.15	26

## Scouting

Moose hunter surveys were returned by 412 of the 765 permittees, 374 (91%) of whom reported that they scouted prior to the hunting season. Average time spent scouting was 26.4 hours/party, and the average number of moose seen per hour scouted was 0.084, or approximately 1 moose seen for every 12 hours of scouting effort. A comparison of scouting data between WMUs is presented in Table 3.

## Successful Hunters

Sixty-four and 62% of resident and non-resident permits, respectively, were successfully filled. The 51 successful non-resident permits were filled by hunters who hailed from 15 different states as follows: MA (15), NY (10), NH (4), CT, PA and OH (3 each), ME, NC, SC and VA (2 each) and one each from CO, KS, MD, MI and NJ. Subpermittees took 66 (14%) of the moose killed. Of 484 moose taken with known implements most (473) were taken with rifles, 8 with muzzleloaders, 2 with handguns and 1 with a bow.

## Unsuccessful Hunters

Overall, 277 hunters were unsuccessful, and 95 (34%) of them returned a survey. Twenty-seven percent of these unsuccessful hunters did not hunt all available days. The number of days hunted by the 95 respondents is shown in the following table:

No. of Days Hunted by 95 Unsuccessful Hunters							
Days Hunted	0	1	2	3	4	5	6
No. of Respondents	0	2	1	3	8	12	69

Fifty-one (54%) of the unsuccessful hunters saw a total of 145 moose, and 30 (or 32%

of all unsuccessful hunters who hunted at least 1 day) passed up 85 moose that they believed they could have taken (26 bulls, 39 cows, and 20 calves).
