

2008 VERMONT WILDLIFE HARVEST REPORT **Wild Turkey**

FISH & WILDLIFE DEPARTMENT (802) 241-3700 / www.vtfishandwildlife.com

Most of the programs described in this report are funded through the Federal Aid in Wildlife Restoration Program. This program initiated in 1937 as the Federal Aid In Wildlife Act and created a system where by taxes are paid on firearms, ammunition and archery equipement by the public who hunts. Today this excise tax generates over a hundred million dollars each year that are dedicated to state wildlife restoration and management projects across the United States. The State of Vermont use these monies for acquiring land, and for restoring and managing wildlife. These excise tax dollars, coupled with state hunting license fees have been the predominate source of money funding the successful restoration and management of Vermont's wildlife resources.

2008 Wild Turkey Report

Spring Turkey Season

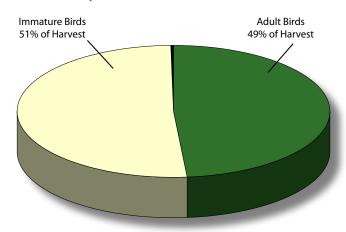

Vermont's 2008 spring turkey season once again established a new, all-time record harvest of 5,454 bearded birds. The new record topped the previous record harvest of 5,024 birds established in 2007. The 2008 tally includes the 735 birds taken in the April youth turkey season, which also established another record harvest for that 2-day season and comprised 13.5% of the total spring harvest.

TURKEY HARVEST BY SEASON 5,454 TOTAL SPRING HARVEST

Adult birds comprised the typical percentage (49%) of the harvest while immature birds comprised the remaining 51%. The 2008 season also included 45 bearded hens in the tally. Birds were harvested in an unprecedented 238 of Vermont's 253 towns, by 4,300 successful hunters.

TURKEY HARVEST BY AGE 5,454 TOTAL SPRING HARVEST

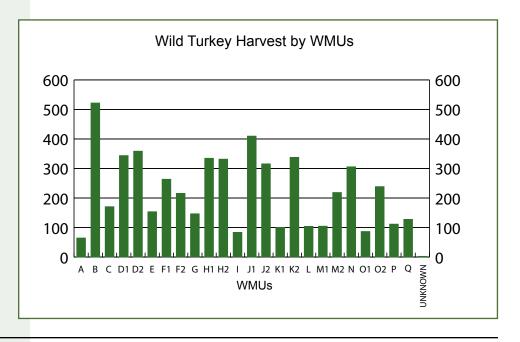

Hunter success rates were very high with 28.1% of hunters harvesting at least one turkey. Among these successful hunters, 26.7% harvested a second bearded bird to fill the two-bird spring bag limit. Hunting pressure in 2008, measured in terms of spring turkey license sales (15,303) was somewhat higher (10%) than 2007 license sales of 13,861 and undoubtedly contributed to the increased harvest in 2008.

The 2008 harvest was up over last year's record in 14 of Vermont's 24 Wildlife Management Units (WMU's) led by a record harvest in WMU B with 522 birds reported, followed by J1 in central Vermont (410 birds) and D2 (359 birds reported) in the northeast.

As in 2007, Windsor County led again this year with the highest harvest numbers reported (670 birds), followed by Rutland County (592), Caledonia County (566), and Orange County (476).

John Hafner - NWTF.org

The 2008 harvest established the fifth consecutive spring turkey harvest record, along with the eighth spring record produced over the past eleven years. In 1998, the department's Wild **Turkey Management Team initiated** structural changes in the turkey hunting season to strongly emphasize high quality spring hunting over providing more fall hunting opportunities. The Team believes this management strategy helped stimulate a three-fold population increase over subsequent years, resulting in this impressive string of record harvests.

Examination of longer-term harvest trends suggests that after a fairly dramatic population increase through the mid-to-late 1990s and into early 2000s, Vermont's turkey population may be stabilizing in the last few years near peak historic levels.

In the interest of maintaining
Vermont's high quality spring
turkey hunting seasons, and in
light of our recent record harvests,
the management team feels our
current management strategy of
a more conservative fall harvest
structure is most appropriate and
should be continued.

Fall Turkey Season

The 2008 fall season resulted in a harvest of 790 either-sex birds, down 25% from the fall 2007 harvest of 1,060 birds, and just slightly lower than the previous three fall season's harvest average of 809 birds. Increased availability of fall hard mast crop in 2008 compared to the fall of 2007 may have been a factor, resulting in the lower harvest. It is important to note, however, that fall harvests typically are poor indicators of Vermont's turkey population trend.

The 2008 fall archery-only season accounted for 65 of the harvested birds, with the balance of the birds (725) taken in the shotgun season. Fall birds were taken in 131 Vermont towns.

As many of our reporting agents (and hunters) have a difficult time discerning the sex and age of fall harvested birds-particularly immature birds-we have learned to view the accuracy of our fall sex and age reported data with caution and some skepticism.

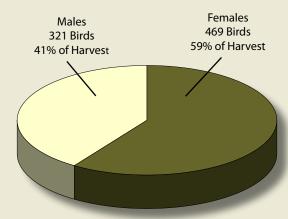

Final tallies indicate immature birds comprised 28% of the harvest, while the female cohort accounted for 59% of the total harvest. Of this female component, 87% were adult birds and 23 % immature. The immature to adult female ratio was 1: 1.8.

AGE DISTRIBUTION OF HARVEST*

*3 Unknown

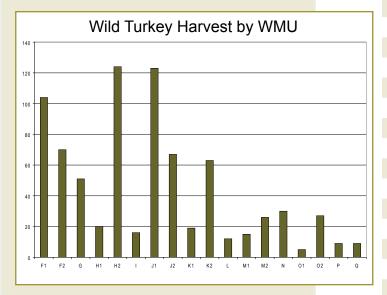

SEX DISTRIBUTION OF HARVEST

Larry Price - NWTF.org

Wildlife Management Unit H2 reported the highest number of fall birds with 124 taken, followed by WMU J1 with 123 birds and F1 reporting 104.
